ASEM™ Complete Stations & RF Modules 1218 MHz For SA®/Cisco® GainMaker®

The ACI ASEM 1.2G RF upgrade modules that are compatible to the GainMaker® amplifiers are designed to work up to a high forward output of 57 dBmV. The return bandwidth split can be easily changed from 42 to 85 or 204 MHz with the use of field conversion kits. ACI's patented DSIM advanced technology keeps both the forward and return signals stable and reliable over extreme temperature swings. Having return band stabilization over temperature has become much more important as return band is increased to 204 MHz. Having the increased return gain of 28 dB enables these amplifiers to drop into existing designs from 750 MHz to 1 GHz.

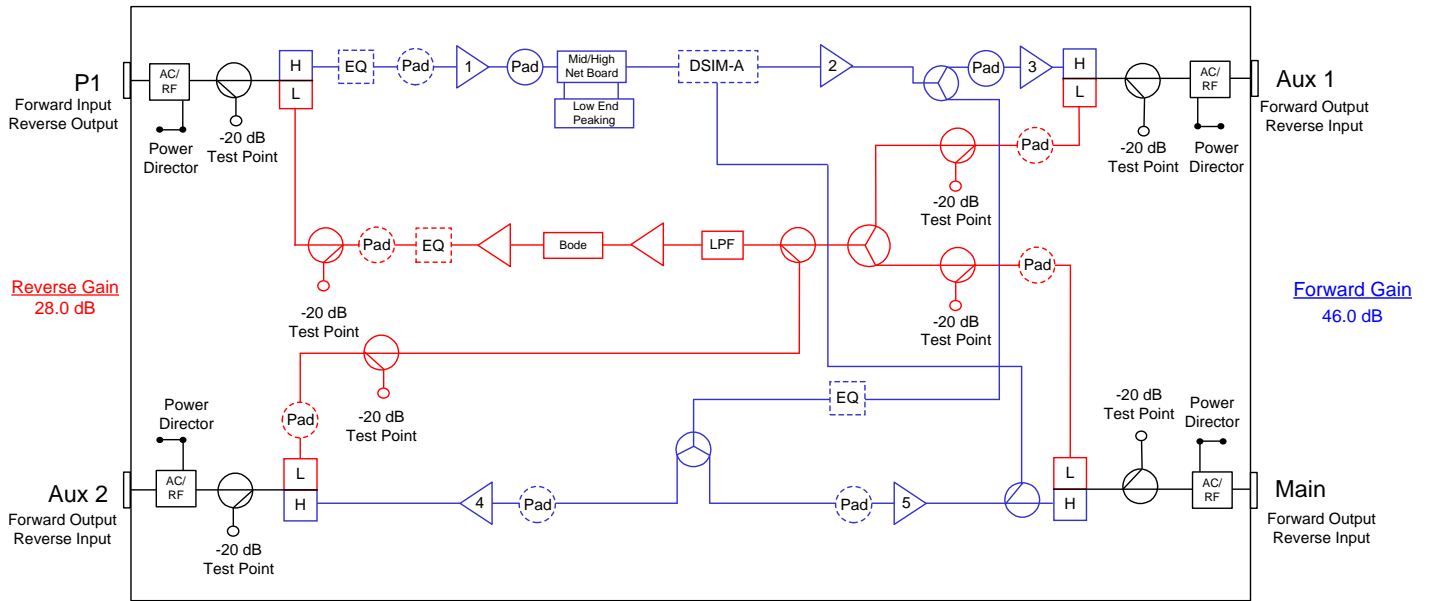

Features

- ◆ Drop-in 1.2G replacement RF modules for SA Sys II, III, and GainMaker®
- ◆ Easy upgrade to 85/105 or 204/258 MHz return bandwidth.
- ◆ 20.0 dB directional coupler test points
- ◆ 28 dB return gain
- ◆ Complete stations available
- ◆ RoHS compliant
- ◆ Patented DSIM® Technology (Programmable AGC)
- ◆ Increased reliability with higher surge protection
- ◆ DSIM controlled return band AGC
- ◆ Pad adjustable forward and return EQ's
- ◆ DSIM Android & Apple iOS setup applications
