

DSIM quick start for legacy C-Cor amplifiers

- Plug the jumper into the DSIM and the Controller into the cable, the controller indicator light should be solid blue/DSIM light will be a steady blinking blue.
- Set the input and output levels to system specifications
- Set the reserve gain by pressing the + button on the controller to max., then back the signal down with the – button as indicated on the temperature chart. (See chart below)
- Set up amplifier outputs to system specification with the input pad.
- Press mode button to place in AGC mode, the controller will flash blue/red, when complete controller indicator light will be solid blue.
- Remove the controller from the cable, and the cable from the DSIM

Refer to install guide for details

Above 100°F	-2dB
Between 80°F & 100°F	-3dB
Between 40°F & 80°F	-4dB
Between 20°F & 40°F	-5dB
Below 20°F	-6dB
